ART UNIT PAPER NUMBER

2166

DATE MAILED: 06/14/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/695,499

Applicant(s)

COATES ET AL.

Examiner

Joon H. Hwang

Art Unit

2166

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 March 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 63-84 is/are pending in the application.
- 4a) Of the above claim(s) 41-62 is/are ~~withdrawn from consideration~~ *Canceled*.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 63-84 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. The applicants canceled claims 41-62 and added new claims 63-84 in the amendment received on 3/3/06.

The pending claims are 63-84.

Response to Arguments

2. Applicant's arguments with respect to claim 63-84 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 63-64, 71, 73-74, 81, and 83 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inniss et al. (U.S. Patent No. 5,708,832) in view of Wilson (U.S. Patent No. 6,718,347).

With respect to claim 63, Inniss teaches a virtual file system ("VFS") to store file system information for a single file system (i.e., a server A 24 in fig. 3, lines 14-40 in col. 1 and lines 25-61 in col. 3), wherein a client of the network storage system accesses the VFS over a network to manage a plurality of files of the single file system, and wherein the client receives a storage resource locator ("SRL") from the VFS to access the file in

Art Unit: 2166

the single file system (lines 25-61 in col. 3, lines 25-46 in col. 4, line 65 in col. 4 thru line 20 in col. 5, and line 47 in col. 6 thru line 4 in col. 7); and a plurality of storage centers, located in locations from each other and the client and coupled to the client through a network, each of the storage centers for storing a plurality of files for the single file system (i.e., a plurality of servers, such as server B and server C in fig. 2, lines 41-67 in col. 3, lines 1-11 and 25-46 in col. 4, and lines 21-43 in col. 5), wherein the SRL includes an identification for a storage center to access one of the storage centers over the network and a unique identifier associated with the contents of the file to uniquely identify the file stored at one of the storage centers (lines 25-61 in col. 3, lines 25-46 in col. 4, line 65 in col. 4 thru line 20 in col. 5, and line 47 in col. 6 thru line 4 in col. 7).

Inniss does not explicitly disclose a wide area public access network, the storage centers located in geographically disparate locations, and the client of the network storage system transmitting the SRL to one of the storage centers over the wide area, public access network to download the file over the wide area, public access network. However, Wilson teaches a wide area, public access network, a plurality of storage centers located in geographically disparate locations from each other and the client, a public access network address for a storage center, the client of the network storage system transmits the SRL to one of the storage centers over the wide area, public access network to download the file over the wide area, public access network (line 35 in col. 28 thru line 7 in col. 29, fig. 12, lines 19-25 in col. 1, line 61 in col. 1 thru line 13 in col. 2, lines 44-67 in col. 7, lines 17-33 in col. 8, lines 35-42 in col. 9, and lines 19-56 in col. 33) in order to provide less expensive implementation of the network system.

Therefore, based on Inniss in view of Wilson, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teaching of Wilson to the system of Inniss in order to provide less expensive implementation of the network system.

With respect to claim 64, Inniss teaches a storage port for accessing at a client, the virtual file system and the storage centers, the storage port to translate a client file system request to a file system request including the file identifier to identify the file in the single file system (i.e., the network file system (NFS) 36 in fig. 3 translates a OS/2 request to a NFS request, lines 25-46 in col. 4, line 65 in col. 4 thru line 20 in col. 5, and lines 44-59 in col. 5).

With respect to claim 71, Inniss teaches a content delivery network coupled to the network storage system (lines 25-61 in col. 3, lines 25-46 in col. 4, line 65 in col. 4 thru line 20 in col. 5, and line 47 in col. 6 thru line 4 in col. 7).

The limitations of claims 73 and 83 are rejected in the analysis of claim 63 above, and these claims are rejected on that basis.

The limitations of claim 74 are rejected in the analysis of claim 64 above, and the claim is rejected on that basis.

The limitations of claim 81 are rejected in the analysis of claim 71 above, and the claim is rejected on that basis.

Art Unit: 2166

5. Claims 65 and 75 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inniss et al. (U.S. Patent No. 5,708,832) in view of Wilson (U.S. Patent No. 6,718,347), and further in view of Nazari (U.S. Patent No. 6,405,201).

With respect to claim 65, Inniss and Wilson disclose the claimed subject matter as discussed above except an additional storage port. However, Nazari teaches at least one additional storage port for accessing a system and storages in the event of failover condition of the storage port (i.e., if a primary file system fails, a secondary file system takes its place, lines 37-44 in col. 4 and fig. 1) in order to provide a fault-tolerant file system. Therefore, based on Inniss in view of Wilson, and further in view of Nazari, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teaching of Nazari to the system of Inniss in order to provide a fault-tolerant file system.

The limitations of claim 75 are rejected in the analysis of claim 65 above, and the claim is rejected on that basis.

6. Claims 66-69 and 76-79 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inniss et al. (U.S. Patent No. 5,708,832) in view of Wilson (U.S. Patent No. 6,718,347), and further in view of Popelka et al. (U.S. Patent No. 6,081,883).

With respect to claim 66, Inniss and Wilson disclose the claimed subject matter as discussed above except a plurality of distributed object storage managers and storage nodes in a storage center. However, Popelka teaches a storage center comprises: a plurality of distributed object storage managers ("DOSMs") for receiving

Art Unit: 2166

requests to access the storage center (i.e., a plurality of network processors 110 in fig. 1 in a computer system, line 66 in col. 2 thru line 7 in col. 3 and lines 45-58 in col. 4); and a storage cluster, comprising a plurality of intelligent storage nodes, for storing files of the network storage system for serving access requests from the DOSMs, each intelligent node including a processor core and a plurality of storage devices (i.e., a FSP node 150 in fig. 1 includes a processor and storage devices, lines 42-54 in col. 2, lines 35-58 in col. 5, lines 20-39 in col. 6, lines 25-39 in col. 11, and fig. 4) in order to provide a scalable computer system. Therefore, based on Inniss in view of Wilson, and further in view of Popelka, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teaching of Popelka to the system of Inniss in order to provide a scalable computer system.

With respect to claim 67, Inniss does not explicitly disclose a multi-cast protocol. However, Wilson teaches a multi-cast feature wherein data can be transferred from a source to more than one destination (lines 19-34 in col. 33) so that in one case, data consistency can be maintained between the source and the destinations. Inniss and Wilson do not explicitly disclose maintaining file information at the DOSMs regarding files stored in the intelligent storage node. However, Popelka teaches maintaining file information at the DOSMs regarding files stored in the intelligent storage node (i.e., read cache 111 in fig. 1). Therefore, the limitations of claim 67 are rejected in the analysis of claim 66 above, and the claim is rejected on that basis.

With respect to claim 68, Inniss and Wilson do not explicitly disclose the DOSMs comprising a data cache to cache file stored in the intelligent nodes. However, Popelka

teaches a data cache for caching at least a subset of files stored in the intelligent node (i.e., read cache 111 in fig. 1). Therefore, the limitations of claim 68 are rejected in the analysis of claim 66 above, and the claim is rejected on that basis.

With respect to claim 69, Inniss does not explicitly disclose a load balancing fabric. However, Wilson teaches load balancers (lines 14-25 in col. 2, lines 43-56 in col. 9, lines 32-45 in col. 31, and fig. 3) in order to maximize system performance. Inniss and Wilson do not explicitly disclose caching data for files in high demand in the data caches of the DOSMs. However, Popelka teaches LRU maintenance for a cache teaching caching data for files in high demand (lines 14-16 in col. 12). Therefore, the limitations of claim 69 are rejected in the analysis of claim 68 above, and the claim is rejected on that basis.

With respect to claim 76, Popelka further teaches selecting one of a plurality of distributed object storage managers (DOSMs) to service the request (i.e., one of a plurality of network processors 110 is selected in fig. 1 in a computer system, line 66 in col. 2 thru line 7 in col. 3 and lines 45-58 in col. 4). Therefore, the limitations of claim 76 are rejected in the analysis of claim 66 above, and the claim is rejected on that basis.

The limitations of claim 77 are rejected in the analysis of claim 67 above, and the claim is rejected on that basis.

The limitations of claim 78 are rejected in the analysis of claim 68 above, and the claim is rejected on that basis.

The limitations of claim 79 are rejected in the analysis of claim 69 above, and the claim is rejected on that basis.

7. Claims 70 and 80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inniss et al. (U.S. Patent No. 5,708,832) in view of Wilson (U.S. Patent No. 6,718,347), and further in view of Kern et al. (U.S. Patent No. 5,870,537).

With respect to claim 70, Inniss and Wilson disclose the claimed subject matter as discussed above except servicing access requests from a disparate storage center in the event that a failure occurs in another one of the storage centers. However, Kern teaches a dynamic failover mechanism for servicing access requests from a disparate storage center in the event that a failure occurs in another one of the storage centers (line 51 in col. 4 thru line 39 in col. 6, fig. 1, and fig. 2) in order to provide continuous data availability. Therefore, based on Inniss in view of Wilson, and further in view of Kern, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teaching of Kern to the system of Inniss in order to provide continuous data availability.

The limitations of claim 80 are rejected in the analysis of claim 70 above, and the claim is rejected on that basis.

8. Claims 72, 82, and 84 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inniss et al. (U.S. Patent No. 5,708,832) in view of Wilson (U.S. Patent No. 6,718,347), and further in view of Mattis et al. (U.S. Patent No. 6,128,627).

With respect to claim 72, Inniss and Wilson disclose the claimed subject matter as discussed above except a digital fingerprint derived from contents of a file. However,

Mattis teaches a digital fingerprint derived from contents of a file is utilized in a file request (lines 6-24 in col. 9) in order to easily locate the file. Therefore, based on Inniss in view of Wilson, and further in view of Mattis, it would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize the teaching of Mattis to the system of Inniss in order to easily locate a requested file.

The limitations of claims 82 and 84 are rejected in the analysis of claim 72 above, and these claims are rejected on that basis.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
